

1. How do you see the future of solar cell technology? Which types of solar cells do you think will have a future.

Perovskite structures work well as the light harvesting active layer of a solar cell because they absorb light efficiently but are much cheaper than silicon.

✓ **Correct**

Thank you for your answer. I hope this course has given you the inspiration to think about the future of our energy supply and the different technologies that are available within the world of solar cells.
